DETAILED ACTION

1. Claims 1-16 are pending.

Allowable Subject Matter

2. Claims 1-16 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

3. The present invention teaches a method of generating key information. Each independent claim identifies the steps of "executing a logical operation among bits in each of the blocks and generating a bit being a result of the logical operation" and "combining the logical-operation-result bits into a second bit sequence" where the second bit sequence is used when "accessing a second matrix composed of predetermined third bit sequences and reading out one from among the third bit sequences in response to the second bit sequence (See claim 1 and Applicant's response mailed Sept 15, 2004 Page 2) The closest prior art, Miyano US Patent No. 5,442,705 fails to teach the above cited limitations and thus fails to anticipate or render the above limitations obvious.
